COVER SHEET

Enclosure 5: Specification of PhD Student Position(s) and Career Position(s)

SNSB rules for this enclosure

When to ignore this enclosure

It is perfectly correct to skip this enclosure if the purpose of your proposal is purely to get support for a research project. In this case, if your sought costs include staff costs, SNSB will not consider the career outlook for the persons involved in the project. If the project is granted support, the research contract will be set up to suit the research project, ignoring issues such as the length of staff positions and what the staff does beyond the percentage time supported.

PhD Student Positions (*Doktorandtjänster*)

If you argue for the need to recruit a new PhD student to your research group, for the benefit of your research programme, and if you want SNSB to consider a research contract especially suited to support of a PhD studentship, then include the following in this enclosure:

- Identify the supervisor(s) and describe their roles, qualifications, and commitments (in percentage of full time) to the PhD supervision tasks (reminder: CV in Enclosure 4).
- Outline a clear plan for the PhD project(s), with expected milestones.
- Put the thesis work expected from the student in perspective to the activities described in Enclosure 1.

Career Positions

If you seek salary support for a named researcher who has a PhD degree (or is expected to receive one before the grant starts), and if you want SNSB to assess the career outlook for that researcher and to consider a research grant suited to the needs of the individual researcher, then include the following in this enclosure:

- Career plan for the researcher and specification of the position sought.
- Specification of research tasks to be performed by the researcher. This is best done by referring to the whole of Enclosure 1 or to work packages or tasks within Enclosure 1.
- Expected results and output of the intended work performed by the researcher. You may refer to sub-sets of Enclosure 1.
- Description of the researcher's connection and collaboration to research projects which are not included in this application.
- If appropriate, letters of support may be included in this enclosure.

Multiple positions

If the application includes several positions that need this enclosure, the positions shall be treated in separate chapters of this enclosure.
