COVER SHEET

Enclosure 6: Specification of Career Position

SNSB rules for this enclosure

When to ignore this enclosure

It is perfectly correct to skip this enclosure if the purpose of your proposal is purely to get support for a research project, including staff costs. In this case, SNSB will not consider the career outlook for the persons involved in the project. If the project is granted support, the research contract will be set up to suit the research project, ignoring issues such as the length of staff positions and what the staff does beyond the percentage time supported. Note that in this case the grant period is usually restricted to a maximum of three years.

Career Position

If the principal applicant wants SNSB to assess the career outlook for her/him and to consider a research grant suited to the career needs of the individual researcher, then please include this enclosure and provide the following contents:

- Career plan and specification of the position sought.
- Description of the researcher's connection and collaboration to research projects which are not included in this application.
- If appropriate, letters of support may be included in this enclosure.

Career positions you may seek include 2-year postdoctoral position, 4-year research fellowship, and 6-year senior researcher position. However, you are also free to propose support to other types of positions that are part of the staff career structure of your university or research institute. In such cases, it is prudent to consult with SNSB before applying.

Size of this enclosure (excluding this cover page)

Maximum 10 pages (including letters of support)
