

Call 2017-R

COVER SHEET

Enclosure 7: Mandatory complementary information for Earth Observation (EO) projects

SNSB rules for this enclosure

Required contents

- The applicant is asked to provide information about the “classification” of the research programme/project, selecting one or several categories (A) basic EO research, (B) applied EO research, (C) calibration/validation activities for a future/new EO satellite, (D) other classification (please specify). In case the research programme/project deals with various types of research (e.g. both basic and applied research), all relevant categories should be stated, indicating which category/categories is/are relevant to which project.
- Brief description of the national and international standing and competitiveness of the group including size of the group, cooperation with other groups at a national and international level, international and major national projects carried out by the group during past 5 years, including involvement in ESA or EC projects.
- For basic EO research, please describe its relevance to the specific field of research, other research fields and benefits to society in large as well as possible future applications if applicable.
- For applied EO research, please describe the specific applications and/or products to be achieved within the project as well as identified and/or potential users in Sweden or elsewhere. Cooperation with companies and other Swedish agencies should also be described.
- For calibration and validation activities, the applicant should include relevant information on the satellite/project, including contact details of the responsible person(s) at ESA or other relevant agency.

Size of this enclosure (excluding this cover page)

Maximum length 2 pages.
